

## **Project description and Installation Instruction.**

This is a project for website design for local community theatre. This project includes website redesign for local community theatre and developing skills working with CMS Wordpress, PHP, FTP client Filezilla. Website was created on cooperation with Jim Aherne ALâ Managing coordinator.

For project was choosen Wordpress Generate Press template. There are changed and used different page template for main page. In the project used custom css styles for subscription forms, pop-up images(section Performance on page <http://alact.ie/theatre4change/>). Also added plugins for galleries and accordion. For final design galleries should be added titles and descriptions of photos.

Full version of up to date website can be seen on <http://alact.ie>

### **Installation.**

For this project deploying you advised to use WAMP, LAMP, MAMP or XAMPP.

You need to download all files from repository and unzip archive.

Copy unzipped project folder to the htdocs folder of the webserver C:\xampp\htdocs\alact.ie .

In the XAMPP Control panel near MySQL click button Admin and create database called **sa115933\_main** and choose in collation field utf8\_general\_ci.

SQL file with database **sa115933\_main.sql** can be found in project folder.

Due phpMyAdmin database size limit you need change allowed max size of file.

Open file php.ini in the folder C:\xampp\php with WordPad and change line to

`upload_max_filesize = 500M`

`post_max_size = 500M`

Restart XAMPP and import dump of database sa115933\_main.sql.

To start project type in the browser <http://localhost/alact.ie>
